

# The `ehhline` package

Robert Ryszard Paciorek <rrp@opcode.eu.org>

2019-05-13

This package extend (via `\AtBeginDocument` and `\patchcmd`) `\hhline` command with a `!{...}` token, which allows build line with  $\LaTeX$  command.

When is used `colortbl` package this package must be load AFTER `colortbl` (because `colortbl` package redefine `\HH@loop` command in `\AtBeginDocument`).

## 1 Example

```
\hhline{%  
  !{\leaders\hrule height 1pt\hfil}%  
  !{\leaders\hbox{\tiny$\star$}\hfil}%  
  !{\hfil...\hfil...\hfil}%  
  !{\leaders\hbox{\hdashrule{1.5mm}{1pt}{0.5mm 0.5mm 0.5mm 0mm}}\hfil}%  
}
```
