Wilber Foundation ?

We do have plans !

GIMP 3.0 (Development branch roadmap)

The focus of this version is to complete the GTK+3 port and reduce technical debt in used technologies.

Benefits:

- Better maintained version of GTK+
- Better Wacom support
- Better handling of HiDPI displays
- Wayland support on Linux
- Refactored code, easier to build new features upon

Feature	Status	Comments
Port to GTK3	done	(except minor API usage, but no major tasks anymore)
Port away from intltool	done	We are now full gettext
Port to meson build	done	Extensive testing phase. Autotools build still available as fallback
Redesign API for scripts/plugin-ins	work in progress	GObject Introspection introduced, along with refactoring, no wire protocol redesign in the end, big API improvements still worked on
Wayland support	work in progress	Various bugs still happen, especially in window management area (broken sizes and positions), color management...
Space invasion	work in progress	Various color management improvements, CMYK support (not as core image format, but import/export and picking/choosing/viewing)...
Multi-layer selection	done	Most code is multilayer aware...
Less "floating selection"	nearly done	Discussed on the gimp-gui mailing list , transform tools still create floating selections
Documentation	WIP	Make sure documentation is up-to-date by release time

[Milestone 3.0 in Gitlab](#)

Social mingling !

Yesterday movie night, tonight happy night ?!

The End

The End To be continued...
