

Other orgs/walled garden

- Need dialogue with WAPF, MWIF, 3GPP[2], 3G.IP[2]
 - Identify formal liaisons if needed as last resort, encourage IETF WG participation, arrange document sharing & mutual review
 - Mutual education / documentation on lessons learned
 - Understand each other's problems
 - Identify IETF work items and dependencies on other orgs' specs
 - WG charters to include liaison reqts
- Walled gardens have perceived benefits for consumer (security, ease of use) and carrier (captive customer). Similar to Intranets & hard to eliminate. Lost transparency.
 - Roaming between walled gardens? Trust models? Legal/social issues
- Need a more general way of escaping the walled garden than Foo over HTTP. Try using IP?
- Need for generic proxy discovery mechanism (find the garden door)
